Infectious Diseases & Immunity Seminar Series

FALL 2014    MONDAYS 9-10 AM    103 GBP (NEW LOCATION)

SEP 15        Vicki Auerbach Stone, UCSC
Host iron and Yersinia pseudotuberculosis pathogenesis

OCT 6         Danica Helb, Greenhouse Lab, UCSF
Dissertation seminar: Development of anti-malarial antibody responses & applications for assessing malaria exposure

OCT 13        Jonathan Braverman, Stanley lab, UCB
Nitric oxide and HIF-1α regulate IFN-γ dependent responses of macrophages to infection with M. tuberculosis

OCT 20        Christoph Grundner, Seattle Biomedical Research Institute
Surprises and opportunities in Mycobacterium tuberculosis phosphosignaling

OCT 27        Jacques Deguine, Barton Lab, UCB
Regulation of neutrophil cytokine production

NOV 3         De’ Broski Herbert, UCSF
Hookworm infections reveal a barrier to mucosal defense

NOV 10        Henry Puerta Guardo, Harris Lab, UCB
Dengue virus non-structural protein 1 and vascular leak: investigating the mechanisms that trigger endothelial permeability

NOV 17        Jonathan Portman, Portnoy Lab, UCB
Mechanisms dampening the toxicity of the pore-forming toxin, Listeriolysin O

NOV 24        Rebecca Lamason, Welch lab, UCB
Examining how intracellular bacterial pathogens target host pathways of intercellular communication for cell-to-cell spread

DEC 8         Mao Taketani, Fischbach Lab, UCSF
Dissertation seminar: A phase-variable surface layer protein from the gut commensal Bacteroides
